OBJECTIVE

I'm a passionate and results-oriented web developer with a strong background in responsive design, modern code, and search engine optimization. I'm searching for a dynamic web development position with a cutting-edge, market-leading company. My goal is to create and develop high-impact websites and online applications that improve user experiences, increase engagement, and spur business growth in order to drive company success.

EDUCATION

R. K. University
Bachelor's Degree in Computer Engineering
2021 – 2025
CGPA - 8.36

V. P. Ghetiya High School
HSC
2019 – 2021
Percentage - 80%

SKILLS

Programming Languages :
- C, C++, Java, JavaScript

Web Languages :
- HTML, CSS, PHP

Frameworks And Libraries :
- Node JS, React JS, Express JS, Bootstrap, .NET

Mobile Application Development :
- Kotlin

Database :
- Mongo DB, MY SQL, Firebase

ACHIEVEMENTS

- I won first place in the prestigious TechnoPlanet hackathon where I showed off my creativity and problem solving skills in an environment that was full of tech and highly competitive. During this intense 6-hour hackathon, I created a fully working PHP-based website on my own, showing off my amazing skills in web technology.

PROJECTS

News Website

React JS

- Starting the process of developing an API-driven React website opens up a world of infinite possibilities for improving your website's functionality and providing users with real-time data and information.
- Let's examine some choices and important factors to keep in mind when utilizing API-powered solutions.
- My expertise is creating React websites that easily include dynamic, real-time data from outside APIs, enhancing functionality and producing an amazing user experience.

Notebook Website

React JS, Node JS, Express JS, Mongo DB

- I led the design and development of a state-of-the-art MERN stack-driven full-stack note-taking online application.
- This transformed note-taking and administration with unmatched effectiveness.
- I demonstrated my understanding of full-stack programming while painstakingly integrating features that were focused on the user.
- increasing the user experience to unprecedented levels.

Inventory Management System

PHP, MY SQL

- Developed and implemented a state-of-the-art inventory management system, revolutionizing the way customers place orders by providing easy-to-use real-time stock visibility and round-the-clock product availability.
- invented a dynamic billing system that generates invoices automatically, improving accuracy, minimizing errors, and providing a superior customer experience.
- By utilizing sophisticated reporting tools and data analysis, I was able to provide the business with actionable insights that enabled them to start making decisions based on data.
- These realizations increased operating efficiency, reduced carrying costs, and optimized inventories.
